

Interruptible Liquefaction Delivery Availability

ILD service is available in accordance with the rates, terms and conditions of Northern's FERC Gas Tariff.

Interruptible Liquefaction Delivery (ILD) service allows third parties to offload liquefied natural gas (LNG) on an interruptible basis from LNG offloading facilities at Northern's existing LNG facility located near Garner, Iowa.

ILD service is usually available every day. However, due to the dynamic nature of Northern's pipeline operations, ILD availability is subject to change without notice, and as a result, available quantities will vary.

Please contact your marketing representative or Mike Barry at (402) 398-7105 in order to discuss specific availability. Northern's minimum and maximum tariff rates for ILD service are \$0.5044/Dekatherm and \$11.7500/Dekatherm, respectively.
